PROFESSIONAL PROFILE

Motivated second-year Computer Science (Software Engineering) student at Belgium Campus ITVarsity (online) with a strong interest in software development, backend systems, cloud computing and databases. I enjoy understanding how systems work behind the scenes, solving problems and turning ideas into structured, functional solutions.

Through university and personal projects, I have developed practical experience with JavaScript, C#, SQL, HTML/CSS, Git, GitHub and Docker, as well as database design, system analysis and software development. I am particularly interested in backend development because I enjoy working with logic, data and the structure that supports applications.

EDUCATION

Belgium Campus ITVarsity

Computer Science — Software Engineering | Second-Year Student | 2025 – Present

Relevant areas of study and experience:

- Software Development
- Programming
- Database Development
- Systems Analysis and Design
- SQL and Database Management
- Object-Oriented Programming
- Web Development
- Software Engineering Principles
- Git and Version Control
- Cloud computing

Teneo Online School

National Senior Certificate / Matric | 2024

Selected subjects:

- Computer Applications Technology — 75%
- Mathematics — 70%
- English — 67%
- Physical Sciences — 60%

TECHNICAL SKILLS

Programming & Development: JavaScript • C# • .NET • HTML • CSS

Databases: SQL • T-SQL • Microsoft SQL Server • Database Design • ERDs • Relational Database Concepts • Normalisation • Queries • Joins • Subqueries • Stored Procedures • Views • Triggers

Development Tools: Git • GitHub • Visual Studio Code • Visual Studio • Docker

Software Engineering: Object-Oriented Programming • System Analysis • UML • Requirements Analysis • Debugging • Problem Solving • Software Project Development • Cloud Computing

PROJECT EXPERIENCE

Personal Portfolio Website

Web Development Project

Designed and developed a personal portfolio website to showcase my skills, projects and development journey.

Technologies: HTML, CSS, JavaScript

- Created and structured webpages using HTML.
- Developed responsive layouts using CSS, still in progress
- Organised website navigation and page structure.
- Published and managed the project using GitHub.
- Continuously improved the website based on usability and design requirements.

UCCAMS — Ubuntu Clinic Appointment Management System (Collaboration project)- Available on GitHub

Academic Systems Development Project

Worked on a system designed to manage clinic appointments and patient information.

- Analysed system requirements.
- Designed an Entity Relationship Diagram (ERD).

- Applied database normalization up to Third Normal Form (3NF).
- Developed system and class diagrams.
- Considered different user roles and system responsibilities.
- Worked with requirements involving appointment scheduling, updating and cancellation.
- Applied structured problem-solving to a real-world scenario.

Skills demonstrated: systems analysis, database design, UML, requirements analysis, problem solving.

ADDITIONAL EXPERIENCE

Events & Décor Assistant

Part-Time / Informal Experience

Assisted with my aunt's events and décor work on a part-time basis.

- Assisted with event preparation and setup.
- Communicated with people and helped respond to requirements.
- Worked in a practical, deadline-driven environment.
- Assisted with organising materials and tasks.
- Developed interpersonal, communication and teamwork skills.
- Learned the importance of reliability, attention to detail and completing tasks to a required standard.

CORE STRENGTHS

Problem Solving: I enjoy breaking complex problems into smaller parts and finding structured solutions, particularly when working with programming and databases.

Willingness to Learn: I am comfortable learning unfamiliar technologies and concepts and applying what I learn through practical projects.

Communication: I can explain technical concepts clearly and communicate effectively with different people.

Teamwork: I understand the importance of contributing to a team, listening to others and completing my responsibilities.

Adaptability: I am able to adjust to new environments, technologies and ways of working.

Organisation: I enjoy planning and structuring tasks, which is reflected in both my academic projects and personal interests.

Attention to Detail: Working with code and databases has taught me to pay attention to small details because they can affect the functionality of an entire system.

CAREER INTERESTS

Backend Development • Software Engineering • Database Development • Cloud Computing • Financial Technology (FinTech) • Technology and Digital Transformation • Systems Development • Software Applications • Data and Information Systems
